Traumatization												
Eyebrow head shaping												
Gradient												

CRITERIA	DECODING CATEGORY
Harmony of the image	The general appearance of the model is assessed: neatness, cleanliness, neatness. It is also assessed to what extent the contestant has emphasized individuality. Whether the participant has managed to achieve individuality.
The Form	The harmonious width, length and proportion of the eyebrow are assessed in accordance with the anatomical structure of the model's face.
Colour	The harmonious selection of the color of their work is assessed based on the color type of the model.
Symmetry	It is assessed how the participant was able to align the natural asymmetry of the eyebrow based on the anatomical initial data of the model.
Traumatization	The presence of planted points, edema, punctures in the form of a dash, obvious redness are assessed. The fewer these signs, the higher the score.
Eyebrow head shaping	Evaluated symmetry in relation to one eyebrow to the second eyebrow, grace and softness.
Gradient	The smoothness of the color transition and intensity are evaluated.
